Weaving the GenAI mindset shift through the whole programme

OSBI asked for a GenAI mindset shift, because learners come from different functional teams with varying levels of GenAI knowledge. A single standalone session cannot produce that shift. We build it into every session instead, with a strong start in the first two weeks.

WHAT OSBI ASKED FOR → HOW WE ANSWER IT

A mindset shift, not only tool skills	A four-step arc runs across the four stages: **Demystify** → **Experiment** → **Redesign** → **Champion**.
A few early sessions on mindset	Stage 1 (S1–S3, Weeks 1–2) is the concentrated start. In AI Practitioner: "How generative AI works", "Why instructions change the output", "Responsible and governed AI use". The shift then continues in every later session.
Learners from different functions	Each session opens with a use case from one OSBI function. All 12 functions open two sessions, so every learner sees their own work early and again later.
Varying levels of GenAI knowledge	A readiness diagnostic in S3; concrete, demonstrated openers before any theory; peer practice and review (S12 in AI Practitioner, S13 in Data Citizen); a guidance clinic before the applied stage; mentor-led application on each learner's own problem.

1 · The same three beats in every live session

10–15 MIN
Spark
Open with a real GenAI use case from one OSBI function.

CORE OF THE SESSION
Build
Hands-on work through the learner's own function.

~10 MIN
Reflect
Two or three prompts and one thing I'll do differently.

This is what was proposed (open with a short GenAI use case, hands-on activity relevant to each function, close with brief reflection points), applied to every one of the 24 live sessions rather than only to each module.

2 · Four shifts, one per stage

STAGE	SHIFT	AI PRACTITIONER: FROM → TO	DATA CITIZEN: FROM → TO
Understand	**Demystify**	AI is magic, or a threat → AI predicts; I direct it and I check it	Data is the analyst's job → Data is evidence I can question
Practice	**Experiment**	One prompt, take what comes → Iterate, structure, reuse	Raise a request, wait for a report → Prepare, analyse and check it myself
Apply	**Redesign**	AI helps me with a task → AI changes how my workflow runs	The monthly report as usual → A decision-ready view my team uses
Prove	**Champion**	It works for me → I can prove it and spread it	These are my numbers → A defended decision others act on

3 · Every function opens two sessions (AI Practitioner shown)

Operations	S1 · S13	**HR**	S2 · S14	**Learning**	S12 · S20	**Risk**	S3 · S21
Finance	S6 · S15	**Lending**	S4 · S24	**Savings**	S5 · S16	**Audit**	S11 · S23
Accounts	S10 · S18	**Procurement**	S8 · S17	**Quality**	S7 · S19	**Customer Insights**	S9 · S22

Operations opens the programme (S1). The Data Citizen pathway follows the same rule with data-focused use cases.

4 · What it looks like in one session: S1, How generative AI works

Spark	**Operations: Exception log to structured summary.** A messy mock exception log becomes a clean summary. Is it understanding, or predicting from what we pasted?
Build	Each learner runs three guided prompts on a mock document from their own function and notes where the output helped or slipped.
Reflect	What surprised you about how Copilot produces an answer? · Where did the output sound confident but go beyond the source? · Which word now describes AI better for you: magic, threat, or predictor?

5 · How we show the shift happened

A five-statement **mindset pulse**, self-rated 1–5, taken four times: S3 (Wk 2) · Clinic (Wk 7) · S21 (Wk 11) · S24 (Wk 13). The trend becomes part of the capability-uplift evidence, alongside each learner's measured before-and-after result (S18–S19) and their mentor-reviewed case (S22–S23).

1. I know what AI can and cannot do in my role.
2. I check AI output before I use it.
3. I reach for AI first on drafting and summarising tasks.
4. I can name a workflow in my team that AI could improve.
5. I have helped a colleague use AI well.

6 · What we need from OSBI

- Two or three real pain points per function, so the opening use cases mirror OSBI's actual work.
- Confirmation of permitted data for exercises (anonymised exports or mock data) and of the Copilot Chat configuration.
- Agreement to run the mindset pulse at the four points, and who sees the results.
- The team list behind the 22 teams, to check the function rotation covers every team.

Draft for discussion at the client connect · Start date to be confirmed · The full flow, session by session, is in AI-Roadmap.
